INCREASED SAM ACTIVITY NORTH KOREA

1. An increase in SA-2 sites and equipment in North Korea was observed on photography (Figures 1 and 2). Twelve new confirmed sites and one probable site were under construction (Figures 1 and 2). One site was in initial stages of construction; the remaining were in mid-to-late stages of construction. Construction on the SA-2 sites probably began [redacted].

2. Large amounts of SA-2 equipment were observed at a new training or support facility (Figure 3) near Hukkyo-ri, 12 nautical miles south of Pyongyang, and at Sondong-ni Airfield (Figure 4) on the east coast. Also, unusually large concentrations of SA-2 equipment were observed at three of the four previously targeted SA-2 support facilities. Nine of the 15 SA-2 sites which were occupied when last observed were covered on [redacted] photography. No significant change in the equipment counts was observed at any of these nine sites. No SA-2 equipment was seen at any of the previously inactive SA-2 sites, 16 of which were covered.
